DOGZIE TOWN

A PLAYSTATION CONSOLE GAME · DOGZIE UNIVERSE

A stylised, high-energy open-world town of dogs, built for PlayStation, where players explore, race, pull off heists and make their mark on the Dogzie world.

“The sky is not the limit. It’s where Dogzie Town begins.”

CREATED BY SANIA (VALKYRIE) · QUÉBEC, CANADA
CONFIDENTIAL · DISCUSSION DOCUMENT · OCTOBER 2026

EXECUTIVE SUMMARY

Dogzie Town, in one page

Dogzie Town is a PlayStation console game set in the **Dogzie Universe**, an original IP created by Sania (known professionally as Valkyrie) in Québec. Players step into a town populated by dogs: they meet its residents, discover its buildings, and progress through a stylised open world, inspired by the luxury of Dubai and Saint-Martin, mixing exploration, high-speed pursuits and heist missions, all with a playful, humorous tone.

The universe already has meaningful creative depth — **approximately 143 characters and 46 buildings** designed for the project — and a clear creative identity, backed by the creator's international art practice, the **Valkyrie gallery**. The game is **in development and not yet complete**. This dossier is not a launch announcement; it is an invitation to open a conversation.

~143
characters designed for the Dogzie universe

46
buildings designed for the town

1
console focus: PlayStation — the core of this pitch

What we are asking

An exploratory conversation with Sony Interactive Entertainment about **publishing, partnership or developer support** options that could help bring Dogzie Town to completion and to PlayStation players. The creator's Phase 2 production budget target is **at least $500,000–$550,000** (see page 11). This is a planning figure, not a set price for any one partner.

Note en français

Ce dossier présente **Dogzie Town**, le jeu console PlayStation de l'univers **Dogzie Universe**, créé par Sania (Valkyrie) au Québec. Il vise à ouvrir une discussion de partenariat ou d'édition avec Sony. Le jeu est en développement : nous présentons honnêtement ce qui existe, ce qui reste à faire et ce que nous cherchons.

Spelling note: earlier project materials, including the website thedogzyfamilyuniverse.ca, used the spelling "Dogzy" and the name "Dogzy Family Universe". This dossier uses the creator's current names: **Dogzie Universe** (the blockchain brand) and **Dogzie Town** (PlayStation).

A town where every dog has a story

Dogzie Town is a **stylised open-world action game** set in a town of dogs, with a look and feel inspired by the luxury of **Dubai** and **Saint-Martin**: sleek towers, sun, turquoise water and high-end living. Players live the life of the town, drive at full speed and take on missions, including story missions where factions meet (page 4). Progress is earned through play and held on the game server. **No wallet, token or outside account is needed to play.**

The gameplay mix is **comparable to** three well-known styles: an open world (GTA-like), speed and chases (Burnout-like), and team heist missions (Payday-like). All of it is told through Dogzie's own cast and humour.

Open world

Steal cars, get tattoos, go shopping and **buy a condo**. A town full of things to do, places to own and ways to express yourself.

Comparable to: GTA

Speed & pursuits

Police chases you escape with **signature moves**, like sending the police car into a field or forcing it off the road. **Each signature move earns bonus points.**

Comparable to: Burnout

Heist missions

Planned missions: **bank robberies, jewellery store heists** and other heists, each one a set-piece challenge.

Comparable to: Payday

Luxury missions · Dubai & Saint-Martin

High-end set pieces in the town's luxury setting: fight off **sea pirates attacking yachts**, run **private jet** missions, compete in **plane tournaments**, and take on other luxury challenges on the water and in the air.

About **143 characters** designed, with **seven collections planned to be playable**. Everyone starts at the base level, so there is no pay-to-win (page 6). Dozens of buildings, shops and places to own, plus live events tied to the sports calendar (page 7).

> *"The sky is not the limit. It's where Dogzie Town begins."*

Comparisons are for description only. Dogzie Town has no affiliation with Grand Theft Auto, Burnout, Payday or their publishers, and those names are trademarks of their owners. Detailed systems are still being finalised; there are no screenshots in this dossier. Given the car theft, pursuits and heists, the target age rating (ESRB/PEGI) would be set with a partner. The stylised dog characters and humorous tone would be kept, and the game would not be presented as a children's title.

Two camps, nine factions, everyone meets

Nine factions in two camps. At the start, each player **chooses a side**, and each faction has missions suited to its style. Names are in the creator's original French.

THE GOOD SIDE · 4 FACTIONS

- Jetset · Jet-set
- Vedettes · Stars
- Justiciers · Vigilantes
- Geeks · Geeks

Jetset missions: protect gold packages; guard a large diamond package at a high-society party.

THE BAD SIDE · 5 FACTIONS

- Criminels · Criminals
- Excentriques · Eccentrics
- Marginaux · Outsiders
- Adoléchien · Drama teens: annoying, full of little crises
- Mordus d'adrénaline · Thrill-seekers

Adoléchien missions: disrupt a "vente de clairon", a cannabis plantation, convenience-store (dépanneur) thefts, shoplifting.

Competitive multiplayer · Always opposite camps

2 PLAYERS

Two players, **local or online**, always on **opposite sides**. Every match is a real challenge.

Design rule · One character per faction per mission

CORE RULE

Every mission includes **one character from each faction**. Depending on the mission, factions **confront** each other, **cooperate** or interact in other ways, in opposing or complementary roles.

Example · The gala: at a fancy party, a **Criminel** tries to steal a diamond necklace guarded by the **Jetset**, while the **Justiciers** and the police investigate.

Cross-role story missions · The singer's show

One event, four roles that confront or help one another:

The obsessed geek
Slips into the singer's dressing room and takes personal souvenirs. His goal is to get caught.

The singer
Delivers her show and catches the geek.

The security agent
Protects the singer throughout the event.

The police investigator
Finds the evidence needed to put a stop to it.

Missions and factions are design direction, to be refined in production. Names are working versions.

02 · ONE UNIVERSE, TWO EXPRESSIONS

Dogzie Town & the Dogzie Universe

Dogzie Universe is the overarching brand and world. **Dogzie Town** is its PlayStation console expression — the same characters, the same places, the same spirit. Each has a distinct purpose:

	DOGZIE TOWN	DOGZIE UNIVERSE
What it is	**The PlayStation console game** — the focus of this pitch.	The main brand and universe, including a digital layer on the Avalanche network.
Purpose	To play in Dogzie Town: characters, buildings and progression on the game server.	Supporting IP and context. Its digital layer offers an *optional* bridge from game balances to a personal wallet, only when a player requests it.
Wallet needed?	**No.** The game is fully enjoyable without one.	Only for players who choose to use the optional bridge.
How it connects	Balances stay on the game server by default.	Player-initiated, using a single-use code and purpose-written contracts.
Status	In development.	Contracts written; **nothing deployed, not audited**.

How the two fit together

1. **Dogzie Universe builds the town:** its places, shops, commerce and structures.
2. **Dogzie Town brings it to life:** on PlayStation, the residents move in and the town becomes a world to play in.
3. **Collections take the stage:** character collections join at the Town stage. Of nine created, seven are planned to be playable.

The collections not yet finished are not counted as ready. The universe continues to expand. Characters always start at their base level: no pay-to-win (see page 6).

Our position for this conversation

- **Dogzie Town is the ask:** a console game and the IP behind it, not token sales.
- The digital layer is **optional and separable**. The console edition is designed to work without it, and we are open to shipping on PlayStation with it excluded or adapted to fit PlayStation platform policies.
- Any connected feature would come only after an independent security review and with Sony's agreement.

An original IP with depth from day one

Scale of the world

Around **143 characters** and **46 buildings** have been designed for the universe — a level of world-building that typically arrives only after several releases. It gives a partner room for content, seasons and spin-offs.

Console-first focus

Dogzie Town is conceived as a **PlayStation console game**: a living-room experience, made to be played on the couch, alone or with friends.

A single creative vision

The universe comes from one creator, **Sania (Valkyrie)**, an international artist (see page 8). This gives it a coherent voice, a recognisable identity and a strong personal commitment to its future.

A brand with a signature

A distinctive black-and-gold identity, the paw emblem and the motto *“The sky is not the limit”* give Dogzie a premium, memorable presence beyond the game itself.

Fair by design · No pay-to-win

CORE RULE

Everyone starts equal. Every player begins with a base character, and characters **cannot be bought already evolved**. Progress is earned through play, not bought, so no one can pay to skip ahead.

Accessories are cosmetic and tradable. In the Dogzie Universe, players can trade or sell accessories to each other as NFTs. Style and self-expression can circulate, but power cannot be bought. In **Dogzie Town** on PlayStation, the same rule applies: progression is earned, no wallet is required, and any trading feature would only be added within PlayStation policies.

Universal appeal, room to grow

Dogs, cars, city life and humour work across markets. The Dogzie Universe continues to expand, and a partner can help shape its direction on PlayStation.

Character and building counts are taken from the project’s existing internal documentation and refer to designed assets for the universe; they are not a claim about shipped, in-game content.

A town that lives on the real-world calendar

Dogzie is designed to keep growing after launch, with expansions beyond the town and in-game moments tied to the big events players already watch.

Expansions & places already created

The Dogzie Family cruise ship

A cruise ship setting for the Dogzie family, opening a new space away from the town.

Big-game football expansion

A football championship expansion, created under the working title “Super Bowl”.

These are two of the five Phase 1 expansions. They exist as universe content and are not yet built into the PlayStation game.

Dogzie Casino · a themed place in the Dogzie Universe

NOT IN CONSOLE GAME

Dogzie Casino is an **NFT map and location** in the Dogzie Universe, a themed place to visit and own. It has a **Las Vegas feel**: showgirl-style stage-show characters, romance-themed characters, and luxury accessories to dress the location. It is **not a gambling game**: there are no slot machines, no wagering and no games of chance. An application for this project is pending with the relevant gaming and alcohol authorities. For PlayStation, it is optional themed IP only. **Dogzie Town contains no gambling**, and this location would not appear in the console edition unless it fully meets PlayStation policies and age-rating requirements.

Vision · Live-culture events

When a major televised sports event is on (hockey playoffs, the big football final, international soccer and more), Dogzie Town would host its own **in-universe themed event at the same time**. Players could watch the game on TV, then keep the moment going in Dogzie Town with festivities, decorations and activities on the same theme.

Built-in moments

The real sports calendar gives reasons to come back throughout the year.

Shared moments

It fits the living room: the same TV, the same evening, the same excitement.

Easy to talk about

Live events give the influencer programme and the community something timely to discuss.

The events would be original, Dogzie-themed celebrations inspired by the real sports calendar. Dogzie has no affiliation, licence or partnership with the NHL, the NFL, any soccer body or any other league. Names such as “Super Bowl” are trademarks of their owners. Any official licence, or final naming for a release, would be looked at with a partner and approved before use.

An established artist behind the universe

Dogzie is created by an established international artist. Sania, known professionally as **Valkyrie**, runs the **Valkyrie gallery**, an art practice that already reaches audiences around the world. For a partner, this means an IP backed by a recognised creative signature, not only a game concept.

23
international exhibitions, including Dubai, Paris, Strasbourg, Barcelona and São Paulo

14
curations: gallerists found her work on platforms such as Singulart and chose it for their collections

Top 10%
of the most-viewed artists on Singulart

41,000
views on Singulart in barely four months

Figures provided by the creator.

New collections every month

Each month the Valkyrie gallery shows a new collection of paintings, exhibited digitally as NFTs. This steady creative output keeps the brand active and visible.

Physical ↔ digital art

Collectors can buy a work as an NFT or as a **physical canvas**. The gallery links traditional painting with digital ownership, a natural extension of a universe that already lives in both worlds.

Why this matters to Sony

- **Brand strength:** an international exhibition record, gallery curations and strong online traction give Dogzie a distinctive visual identity and an existing audience.
- **Creative credibility:** a creator who produces new work every month and can carry the look of a franchise over time.
- **An optional art layer:** the gallery is a companion to the IP. It is **not part of the console ask** and nothing in Dogzie Town depends on it.

The Valkyrie gallery and the Dogzie Universe blockchain bridge are separate from the PlayStation game and stay optional. Any link to them in a console edition would only be considered within PlayStation platform policies. New collections are shown as they are completed; the universe continues to expand.

The natural home for Dogzie Town

Platform fit

Dogzie Town was conceived for PlayStation from the outset. A console-first, stylised action game with a large original cast fits PlayStation's audience of open-world and action players.

Original IP with franchise potential

Dogzie is new, fully original and owned by the creator. With well over a hundred characters and dozens of locations already imagined, it offers room for updates, sequels or companion experiences, if the first game earns them.

What Sony's expertise would bring

- Production guidance, quality standards and certification know-how.
- Development support and the tools to complete a PlayStation build.
- Publishing, marketing and reach that an independent creator cannot achieve alone.

Long-term ecosystem vision

Dogzie could become a full ecosystem: **console, blockchain, NFTs and its own token, Dogzy**.

1 · Dogzy for accessories

Some items can be paid in BNB or other crypto, but **accessories can only be bought with Dogzy**. There is no other option.

2 · Earn, export, exchange

Tokens earned in console missions can be exported to a wallet and exchanged for Dogzy. For example, 500,000 in-game tokens could become 5 Dogzy, depending on Dogzy's value.

3 · Both worlds to export

Exporting requires a character in **both** Dogzie Universe and Dogzie Town. Players in only one world play the missions normally, with no export.

This is a vision, not a live feature, and the exchange figures are illustrative only. The Dogzy token and bridge contracts are written but **not deployed and not audited**. They sit outside the console game, which works fully without them, and nothing would connect to PlayStation without an external audit and Sony's approval under its platform policies. The ticker is still to be finalised (DGZY or DOGZY).

Our honest view: Dogzie Town is at an early stage. A partnership would mean investing in finishing a game, not acquiring one that is ready to ship.

05 · CURRENT STATUS

Where the project stands today

We prefer to be transparent. Below is a straightforward picture of what exists and what does not yet exist.

AREA	STATUS	NOTES
Universe & brand identity	IN PLACE	Dogzie Universe, Dogzie Town, black-and-gold identity, motto.
Character & building designs	IN PLACE	~143 characters and 46 buildings documented for the universe.
Expansions, soundtrack & trailer	CREATED	5 expansions, an original soundtrack and a trailer, made by the creator in Phase 1.
Dogzie Town console game	IN DEVELOPMENT	Not finished, not released. Build to be completed.
Gameplay design documentation	TO FINALISE	Core loops and systems to be documented for partner review.
PlayStation development pipeline	TO ESTABLISH	Platform tooling, technical requirements and certification readiness.
Game server & progression	IN PROGRESS	Server-side balances and progression; API still to be completed.
Optional digital layer (Avalanche)	WRITTEN ONLY	Dogzy token and bridge contracts written; **not deployed, not audited**; not connected to the game.
External security review	NOT STARTED	Required before any deployment of the optional layer.

What this means

The creative foundation is strong; the production work is ahead of us. We see this as the right moment to speak with Sony — early enough that a partner's input can shape the game, and with enough material to show what Dogzie is.

Nothing in this dossier should be read as a claim that the game is complete, that any contract has been deployed, or that any security audit has been performed.

Built lean. Ready for the next step.

Dogzie has been built in two phases. The first was a lean, creator-led phase that is now done. The second, the PlayStation game, is the costly production phase, and it is why we are asking for this conversation.

Phase 1 · Dogzie Universe foundation

COMPLETED

Built by the creator alone for about **$500 in cash**, which covered tool subscriptions only (cloud hosting, Replit, Suno). Everything else came from the creator's own work:

~143	~46	5
characters	buildings	expansions

Also made by the creator: an original soundtrack, a trailer, and the code for the blockchain layer (contracts and bridge logic). This time is the creator's **sweat equity** in the IP. It is substantial, and no cash value is claimed for it here.

Phase 1 is complete as a build. The blockchain contracts are written but **not deployed and not audited**, and they remain optional and separate from the console game.

Phase 2 · Dogzie Town on PlayStation

SEEKING PARTNER

Turning the universe into a finished PlayStation game takes a different scale of resources: a production team, console development and tooling, QA, certification, localisation, marketing and distribution. That cannot be done on a lean budget. This is the phase where a publishing or partnership relationship with Sony would make the biggest difference.

$500K–$550K+

The creator's **funding target for Phase 2**, set to cover PlayStation production in full without shortfalls. It is a raise she plans to make alongside a publishing conversation. It is not a demand that Sony fund this exact amount, and the structure is open to discussion.

What this shows a partner

- **Capital efficiency and commitment:** a large, coherent universe built for roughly $500 in cash plus the creator's own time.
- **A clear next step:** Phase 2 is a defined production need with a budget target the creator has set.

A simple structure and a built-in launch plan

100%

of the company is owned by the creator, Sania (Valkyrie). That keeps the structure simple for any publishing or partnership agreement.

5 × 1%

lifetime royalties planned for five influencers who would promote the game over the long term.

Influencer royalty programme

Players trust the creators they follow. Rather than paying for one-off promotion, the plan is to give each of five carefully chosen influencers a **1% lifetime royalty**. Their interest then lines up with the game's success over many years, not just at launch.

What each influencer commits to: mention Dogzie on **every one of their live streams** and share short updates on development progress. Over time this builds a community that is ready and waiting, so the game **opens with a bang** on launch day.

SEATS	PROFILE	ROLE
2	Top console gaming creators	Reach PlayStation players directly, especially fans of open-world and action games.
2	Top blockchain gaming creators	Bring along the existing digital community of the wider Dogzie Universe.
1	Hybrid creator (console + digital)	Connect both audiences and show the full universe.

Total planned: 5% in royalties across all five seats. The influencers have not been chosen or signed yet.

How this fits a PlayStation launch

- **The console comes first:** the PlayStation game is the product. Influencer promotion supports it.
- **Coordinated with a partner:** the programme would line up with any publisher's marketing plan and approvals.
- **Done properly:** all promotion would follow advertising disclosure rules and PlayStation policies. The blockchain layer stays optional and separate, and its contracts are not deployed or audited.

From universe to finished console game

The following milestones describe the path to a complete PlayStation release. Timing and scope would be defined together with a partner.

Milestone 1 · Design lock

Finalise and document the core gameplay loop, progression and the selection of characters and buildings for the first release.

Milestone 2 · Vertical slice

A playable, representative portion of Dogzie Town demonstrating tone, controls and the core experience — the basis for a deeper partner evaluation.

Milestone 3 · Full production

Content build-out, game server and progression API, art and audio, accessibility and localisation (including French and English).

Milestone 4 · Platform readiness

Testing, quality assurance, PlayStation technical requirements and certification, age rating.

Milestone 5 · Launch & live care

Release on PlayStation, followed by updates that draw on the wider Dogzie universe.

Gaps we are looking to close

- Production capacity and experienced console development support.
- Platform tooling, technical guidance and certification know-how.
- Publishing, marketing and distribution expertise.

07 · OUR ASK

Let’s start a conversation

We would welcome an exploratory discussion with Sony Interactive Entertainment to understand which path — if any — could suit Dogzie Town. We are open to:

- **Publishing** — Sony as publisher of Dogzie Town on PlayStation.
- **Partnership or co-development** — support to complete the game to PlayStation standards.
- **Developer programme guidance** — advice on the right entry point for an independent creator.

Phase 1 was self-funded by the creator. For Phase 2, the PlayStation production, her budget target is at least $500,000–$550,000. How Sony might take part (publishing, co-funding, development support, or a mix) is open, and we would rather understand Sony’s view and requirements first.

Proposed next steps

- Introductory call to present the universe and the creator’s vision.
- Sharing of design material and character/building documentation under NDA.
- Agreement on what Sony would need to see (e.g. a vertical slice) for a deeper evaluation.

Sania · Valkyrie

CREATOR, DOGZIE UNIVERSE & DOGZIE TOWN · QUÉBEC, CANADA

thedogzyfamilyuniverse.ca (historical spelling)
